

BIM Assure: Deliver complete, reliable BIM data.

Invicara unlocks BIM with BIM Assure – collaborative, cloud-based software that helps owners and project teams work together to create complete, reliable model data.

BIM Assure is designed for non-modelers to easily access models and data with just a web browser.

Unlock BIM Data

Decouple data management from modeling – so non-BIM users like engineers or project managers can enter and update data.

Get Reliable Data

BIM Assure helps verify and validate data deliverables at each milestone. Dashboards show data quality at a glance.

Share Data

Easily export building data to Excel for analysis, to share with other stakeholders, or to import into other systems.

Key Capabilities

Cloud-based model viewing lets modelers and non-BIM users alike access models in a standard web browser.

Slices highlight the elements and data that matter to you to streamline data management.

Revit integration and data sync provide a seamless workflow with the modeling team.

International foundation classes (IFC) support lets you check data from a wide range of design and construction tools.

Data rules and analyses validate model data against deliverable requirements.

Issue browser makes it easy to find and fix data issues found by BIM Assure's rules.

Reports export issues and model data to configurable Excel spreadsheets.

Normalization helps you create a repeatable system for consistent data management across all your projects.

Easy as 1, 2, 3.

BIM Assure's workflow is simple:

1. Publish directly from your BIM authoring tools to BIM Assure
2. Use BIM Assure's templates or create your own rules to find and fix data issues. Anyone on the team can view and manage data
3. In the authoring tool, sync the fixes back into the original model.

Your Success Assured

Easy-to-use: BIM Assure is designed to be simple to set up and use. From setting up projects, to configuring rules, to managing BIM content and team members - you'll be ready to roll in no time.

Jump start with templates: You don't have to start from scratch every time! BIM Assure allows you to create a library of analysis templates that you can reuse across projects to address a wide range of BIM data needs. From common checks for day-to-day model data issues to robust templates targeted at specific workflows, BIM Assure's templates will help you realize value quickly.

We're there when you need us: The BIM Assure application services team is staffed by skilled industry consultants with dozens of years of experience in AECO workflows. When you need support or training, we'll be ready.

Our goal? You'll get better BIM data right out of the gate!

Create a Digital Twin Foundation

Once you know your building data is complete and reliable with BIM Assure, you can use your model as the foundation for Invicara's Digital Twin Solutions. Digital Twin Solutions help building owners streamline asset management, reduce operations costs and optimize building performance.
